Assessment of Student Learning and Institutional Effectiveness is a continuous institution based process, which is focused on understanding and improving student learning and improving overall institutional effectiveness.

A. Introduction

West Virginia Northern Community College is a learning focused organization that recognizes commitment to assessment of student learning as part of our culture consistent with the Board of Governors Assessment Rule. Assessment of student learning is a college-wide process, driven by the faculty supporting the college mission. Assessment of student learning is a critical component in establishing institutional effectiveness in achieving the college's mission.

West Virginia Northern Community College's mission is to educate and empower individuals to achieve academic and career goals, leading to a highly skilled, well-rounded, and accomplished workforce which successfully competes and adapts in a global economy.

The College responds to the needs of the region it serves by offering a high-quality learning environment that is accessible, safe, and accommodating while nurturing teamwork and community service.

West Virginia Northern Community College is recognized and admired for being a community of learners who model integrity, mutual respect, and a commitment to excellence. The College purposefully strives to:

- Empower students to be successful
- Achieve continued growth
- Be responsive and adaptive
- Value personal growth and development
- Be fiscally responsible
- Respect diversity
- Be entrepreneurial whether in the classroom or online, and
- Enhance partnerships and community service

Assessment is an on-going process designed to enhance student learning by measuring the extent to which students achieve learning outcomes valued and defined by the faculty and using the results of data gathered from the assessment process to make improvements. This process is embedded in the curriculum as a natural part of teaching and learning. At Northern, assessment begins on admission and culminates at the completion level (certificate, degree, or transfer point). Faculty assessment

DRAFT

activities are coordinated and supported under the supervision of the Vice President of Academic Affairs, the Institutional Assessment Coordinator and Committee, and the Office of Institutional Research.

B. Historical Perspective

Historical Perspective of Assessment at WVNCC

Assessment at Northern had its unofficial beginnings in 1992 with the institutional self-study in preparation for a re-accreditation visit by NCA. The College was required to have an assessment plan as part of the process. Like many institutions at that time, Northern and its faculty were grappling with terminology and philosophy and attempting to develop an assessment plan to measure student learning which would also satisfy state and NCA requirements. Several of the faculty and the academic vice president had attended a workshop by Patricia Cross in 1991. Much of the faculty efforts related to assessment centered around Cross and Angelo's classroom assessment techniques. The faculty had spent considerable time between 1988 and 1991 debating, developing, and implementing a program for College entry-level assessment and placement. As a result of the self-study in preparation for the 1992-93 visit and a deeper understanding of assessment by the faculty and administration, a core group was formed to coordinate development of the assessment plan. A key element in the development of the plan was that assessment should be linked to the College's mission and this component has remained consistent throughout revisions of the plan. Assessment data and information gathered through focus group meetings held during the Fall of 1992 and the 1993 NCA team visit provided valuable guidance regarding assessment of student academic achievement. Not surprising to the institution, the NCA Team report indicated that minimal progress had been made in the area of assessment and included this concern as an area to be addressed in a focus visit scheduled for 1996-1997.

A committee comprised mainly of faculty was formed in the Fall of 1993 to develop an assessment plan. After a review of various assessment models and spirited debate within the committee, the Assessment Committee recommended that the institution begin with micro-assessment at the course level and move to a macro approach as the assessment initiative matured. The assessment plan recommended by the committee, was adopted by the institution, submitted to NCA, reviewed as part of the focus visit in 1997, and subsequently approved by NCA. The team report from the focus visit reported that "it has been determined that the concern for assessment has been addressed, since a plan is in place and is being implemented." (*Report of a Focus Visit, April 15-16, 1997, Pg. 10.*)

The Assessment Committee continued to evaluate and refine the assessment program and faculty implemented the plan by attending professional development activities, establishing objectives for individual courses and programs, establishing cycles for assessing courses and collecting and analyzing the data. The Assessment Committee reviewed the data and made recommendations to programs and academic divisions about

refinements in the micro-level assessment and changes that needed to be made to move to a macro-level approach. The Associate Dean for Academic Affairs facilitated much of the data compilation and provided technical assistance to the program faculty for both assessment and program review. By the Spring of 2000, outcomes had been submitted for 294 of 300 possible courses (98%). Assessment reports had been received for 166 courses by the Spring of 2001. However, 65 of the courses without assessment reports had not been offered since the outcomes had been defined or still were within the 2-year review cycle. Therefore, assessment reports had been received for 166 of the 235 possible courses (71%).

A significant impediment to complete implementation was that acquisition of data was difficult because the College did not have a functional institutional research office. Prior to 2001, institutional research was a shared function between the computer center and other offices within the College that needed the data. Recognizing the need to improve the institutional research area, the College included development of an IR office in a Title III Grant which was funded in 2001. The College established a full-time position of Director of Institutional Research in Summer 2001 and has used the Title III grant to provide financial assistance to help fund the position, to establish the IR office, and to establish systems to enhance assessment of student learning and evaluation of institutional effectiveness.

Several organizational changes occurred in the Fall of 2001 which impacted upon implementation of the assessment plan. The position of the Associate Dean of Academic Affairs was eliminated and responsibility for facilitating data collection was assigned to the Director of Institutional Research. In addition, the Assessment Committee was changed from a standing committee to a sub-committee of the Academic Affairs Committee with the goal of better linking assessment and curriculum development.

By 2001 the College was in the midst of another self-study process in preparation for a NCA re-accreditation visit in 2002-03. The self-study process made it obvious to faculty and the administration that implementation of the assessment plan was proceeding much slower than had been anticipated. The Academic Affairs Committee determined that curriculum development and assessment each required too much time for one committee and recommended that assessment once again be the responsibility of a separate assessment committee. Faculty in some divisions and programs were continuing assessment efforts but implementation was sporadic. There was limited progression to macro-level assessment. Further indication that the assessment program was lagging came from an HEPC review of student academic achievement at all State colleges and universities conducted by the National Center for Higher Education Management Systems (NCHEMS). The NCHEMS report indicated that many West Virginia institutions were struggling with assessment and expressed concern that Northern was making little progress in implementing its assessment plan.

In light of the findings of the self-study committee, the Academic Affairs Committee and the NCHEMS review, the college began the process to revitalize the assessment program.

A revised assessment plan, which built upon the previous efforts but more aggressively moved toward macro-level assessment, was presented to the faculty in August 2002. The College community moved to implement the revised plan. A new assessment committee called the College Leadership Team for Assessment (CLTA) was established and the Faculty Senate established a General Education Committee. A new appointment to the position of Director of Institutional Research was made. A key element in the revised assessment plan was the requirement that Master Course Guides (MCG's) be developed for all courses. The MCG's were established to improve many aspects of instruction and assessment by standardizing the process and defining expectations for students. A format was developed for the MCG's and workshops were conducted for both full-time and part-time faculty to explain the process. The self-study found that progress had been made in many areas but there were numerous deficiencies. Some of the problem areas were that the College had not moved to macro-level assessment as planned, feedback loops were not well developed, documentation and review of assessment activities was not systematic, general education was not assessed as a program area, and there was little connection between assessment processes and budget development. The NCA Team report verified many of the College's findings and a focus visit on assessment was scheduled for 2007-08.

Organizational changes in 2003 and 2004 blunted some of the momentum gained during the self-study process. In two academic administration re-organizations, academic centers were eliminated and replaced by departments and then two associate deans were established. Forms which referred to academic centers and divisions, were obsolete and there was confusion about where assessment reports were to be submitted and who was coordinating implementation. The position of Dean of Institutional Effectiveness was created for the 2003 academic year with coordination of assessment as a major responsibility. However, the search became prolonged and the Dean was not hired until spring 2004. Shortly after that the Dean of Academic Affairs office was re-organized and the Dean position was vacant from July 2004 until January 2005.

The Assessment Committee was re-constituted for the 2004-05 academic year and began working with faculty to revitalize assessment. The Committee began making reports at Faculty Senate meetings and gathering input from faculty. Some best practices in assessment were shared with faculty at a January meeting on assessment. New forms for reporting assessment activities were prepared and shared with faculty. The Committee asked all faculty to participate in an assessment activity for the 2004-05 year and submit reports on the activities. All full-time faculty indicated they were participating in an assessment activity. The Committee drafted a revised assessment plan to be presented to the faculty for discussion, revision and adoption in the fall of 2005.

In 2009, discussion began about the assessment of institutional processes and staff unit operations not considered "academic". In 2010, annual staff unit (department) assessment reports were initiated. In the following year, a staff unit assessment report peer review form was created and 2010 staff unit reports were peer reviewed. This process is now in place and will continue on an annual basis.

After the HLC visit in 2012, a recommendation was made to include assessment of general education outcomes. General Education and Assessment Committee made a decision to conduct college wide assessment of two general education outcomes at the course level. A general education core outcome survey (Appendix D) was designed and emailed to faculty in fall 2014. Survey listed two general education outcomes:

1. Communicate effectively
2. Demonstrate Human and professional development skills.

Survey required faculty to report if stated general education outcomes are assessed and to provide specific examples of outcomes assessed. Faculty completed the survey during a professional development in spring 2015. General education committee created a General Education Outcomes Assessment Form (Appendix E) to organize data. During a meeting with the VPAA, Chair of the General Education Committee Chair, Director of Institutional Effectiveness and Liberal Arts, Communication, and Sciences division chair, it was determined; the data collected was not useful in determining the degree to which the outcomes were met. It was also determined that the same information is missing on the submitted assessment reports. A decision was made to include the degree to which the assessment is met on the assessment report. This required updating Pre-Assessment Forms, and the Assessment reports.

In October 2015, Director of Institutional Effectiveness and the Liberal Arts, Communication and Sciences division Chair attended Assessment workshop sponsored by Higher Education Public Commission (HEPC). During the workshop, a Guide for Assessing General Education Outcomes (Appendix F) was distributed. The guide included general education outcomes for students receiving a certificate, an associate, a bachelor, and a master's degree. Guide also listed Essential Traits and acceptable Benchmarks for each of the levels. Guide was approved by WV Higher Education Council. Using the guide as a framework, Assessment Reporting Form was updated to include Essential Traits, Learning Activities, Measurement instruments, and the degree to which the outcome was met.

During a professional development workshop in November 2015, the updated Pre-Assessment Form and the Assessment Reporting form was shared with faculty. A timeline and procedure for submitting Pre-Assessment and Assessment Reporting Form was shared.

During the spring semester; a total of thirty (30) Pre-Assessment Forms (Appendix G) were submitted. A review of the submitted form indicated a lack of understanding in foundation and procedural knowledge in assessing and reporting assessment of learning outcomes. This was an important finding and needed to be addressed to make the process, reporting, and using assessment data to improve student learning.

C. Goals

The Goal of WVNCC Assessment Plan is to have a well-defined, continuous process to:

- Enhance Student Learning;
- Improve Instruction and Curriculum; and
- Improve Institutional Effectiveness

D. Principles for Assessment of Student Learning

Student learning improves when faculty and students can identify what students are to learn, how they are to learn it, and how they will know that they have indeed learned it. Effective assessment formalizes this knowledge. To be effective, assessment of student learning must be part of the institution culture. To ensure institution-wide acceptance and participation, Northern subscribes to the following principles to guide assessment of student learning:

1. Assessment shall flow from the mission and vision.
2. Assessment shall improve learning from course to completion level.
3. Assessment shall not be punitive to students, faculty or staff.
4. Assessment shall be designed and implemented by the faculty.
5. Assessment shall involve multiple measures in multiple contexts to create a composite picture of student learning.
6. Assessment results shall be distributed institution wide.
7. Assessment results shall be used to improve student learning by improving courses, programs, and institutional support services in a recurring cycle.
8. The assessment plan and the assessment web page and related content shall be evaluated for continuous improvement.

E. Assessment Definitions*

A coherent institutional approach to assessment requires that the participants share a common vocabulary. “Talking the talk” of assessment precedes effectively “walking the walk.” To ensure a consistent understanding of assessing student academic achievement, Northern accepts the following definitions:

Assessment Analysis: The careful analysis of the patterns in students’ learning that is used to modify instruction, programs and services.

Assessment of Student Learning:	The measurement of overall student performance in relationship to identified learning outcomes at specified points in the student role as a developing learner.
Benchmark:	(performance standards, performance indicators) These are the level of student competence in a content area and group performance as measured against an established content standard. These standards may be different at various points in the educational process.
Classroom Assessment:	An exercise or activity, which is selected or designed by the individual instructor, to help determine what students are learning. Assessment takes place during a single class meeting or a small number of consecutive class meetings. The typical question addressed by the assessment is, "Did students learn what I intended them to learn today?"
Content Class:	The class is related to the subject matter of the certificate or degree, as opposed to a class in the general education core.
Course Assessment:	The activities selected by the faculty members who teach a course that are used to discover if the students are meeting the Master Course Guide learning outcomes. Course instructors - occasionally that would mean an entire department - decide if the results require changes in the course methodology or in the Master Course Guides. The typical question addressed by course assessment is, "Do students taking the course learn what we, the faculty who teach it, intend them to learn and acquire the knowledge, skills, attitudes, and competencies, which we intend for them to have at the end of the course?"
Direct Assessment:	Evidence that is collected about student learning based on student performance that demonstrates the learning itself. This can be value added, related to standards, qualitative or quantitative, embedded or not, or using local or external criteria. Examples are: written assignments, classroom assignments, presentations, test results, projects, logs, portfolios, and direct observations.
Formative Assessment:	The gathering of information about student learning during the progression of a course or program and usually repeatedly-to improve the learning of those students. Assessment feedback is short term in duration.

Indirect Assessment:	Evidence that is acquired about how students feel about learning and their learning environment rather than actual demonstrations of outcome achievement. Examples include: surveys, questionnaires, interviews, focus groups, and reflective essays.
Institutional Effectiveness:	The accrediting agency term for the collective effect of all these measures as an assessment of the whole college. A typical question for this level is, “Does the college fulfill its stated mission?”
Master Course Guide:	This document identifies course content, student learning outcomes, and student performance objectives. The Master Course Guide is the official document by which faculty delineate the course definition, structure, student learning outcomes, and student learning performance objectives. Every course taught on all campuses is required to have a Master Course Guide, which is designed by faculty members in the Division who teach that particular course. All faculty members on all campuses must adhere to the requirements contained in each Master Course Guide. It is essential that the Master Course Guide be current and followed if courses are to have the continuity that is vital to ensure the desired student learning outcomes. MCGs are updated with course scheduled assessment or as needed with revision of a course, approved by the division chair, and confirmed by the Vice President of Academic Affairs. Approved Master Course Guides are available in division offices and in the Faculty Document Center (webpage).
Learning Outcome:	This is an operationally defined educational goal that can be measured. These goals are the knowledge, skills, and competencies that students are expected to exhibit upon successful completion of a course, academic program, general education requirement, or other experiences.
Learning Performance Objective:	This is a performance (cognitive, psychomotor or affective) objective which is phrased in behavioral, measurable terms.
Objective:	An objective is a precise statement that describes the knowledge, performance, or behavior a student is expected to learn or demonstrate as a result of instruction. Objectives

typically relate to lessons or units, not “big ideas” such as described by an outcome.

- Outcome:** An outcome is a goal (as in Institutional also) that: Is a statement of what students should know or be able to demonstrate with achievement of objectives within the course or program of learning. An outcome addresses the content of one or more objectives; is broader in focus; probes the range and depth of thinking skills; is amenable to assessment; may integrate general education learning areas; and may reflect tasks outside the classroom.
- Portfolio:** A systematic and organized collection of a student’s work that exhibits to others the direct evidence of a student’s efforts, achievements, and progress over a period of time
- Program Assessment:** An activity identified by faculty members of a program to measure one or more of the many outcomes (goals, objectives) that are intended by that program. Program assessment is done on an annual basis for the institution, every 5 years as required by the state, and as scheduled by external accreditation agencies. Typical questions addressed by program assessments are
- Occupational Programs:
“Can most of our graduates find employment in the field?”
 - Transitional Programs:
“Are most students successful in a given transitional course for which that course was a prerequisite?”
 - Transfer Programs:
“Are transfer students as successful as native students in achieving a degree?”
- Program Outcomes:** These are a coherent set of learning outcomes that refers to specific knowledge, skills, or achievements as a result of a planned set of courses constituting an area of specialization that the student is expected to exhibit upon successful completion of the academic program. These are reflected in the student learning outcomes related to the academic programs as a unit rather than individual courses.
- Standardized Test:** This is an objective test that is given and scored in a uniform manner. Standardized tests are carefully constructed and items are selected after trials for

appropriateness and difficulty. Tests are issued with a manual giving complete guidelines for administration and scoring. The guidelines attempt to eliminate extraneous interference that might influence test results. Scores are often norm-referenced.

Student Learning: Knowledge, skills, and attitudes acquired through formal instruction, study, and practice.

Summative Assessment: Assessment that is done at the conclusion of a course or some larger instructional period (e.g., at the end of the program). The purpose is to determine success or to what extent the program/project/course met its goals.

Assessing Student Learning and Institutional Effectiveness: Understanding Middle States Expectations, 2005

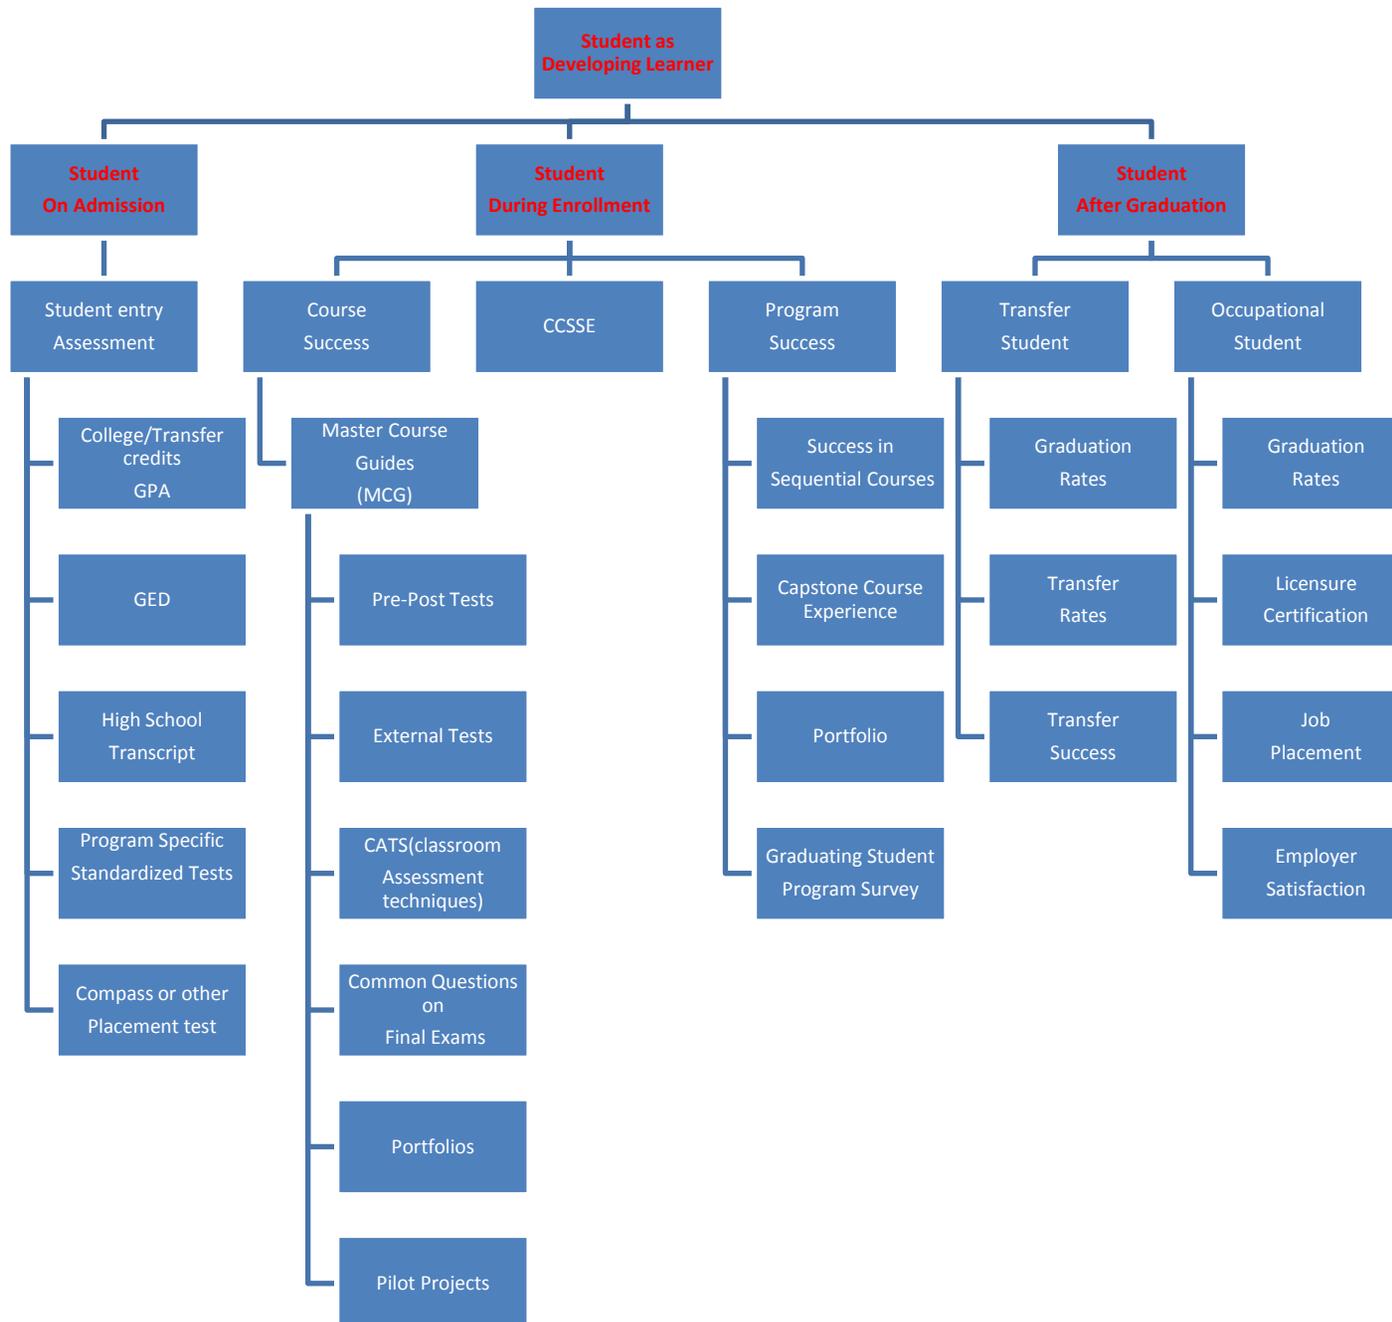

F. Theory and Model for Student as a Developing Learner

Assessing student learning involves constructing a picture of the students at three points: admission, during enrollment, and after graduation. The focus is on the students as *developing learners*: what do they know, what is available when they come to Northern, what they can learn here, and what they can do with what they have learned after they have left the college. Collectively, the data allows informed discussion of educational processes, such as development of curriculum prerequisites, course sequencing, and addition of courses; learning technologies - applications of technology, use in class work, and computer literacy; and learning environments - promoting student readiness to learn, learning styles, and learning expectations. The student as a developing learner is the heart of assessment as shown in this model.

1. Students at Admission

The college needs to know the capabilities of the students enrolling. To assess what students are ready to learn at Northern, the college has to know the level of their preparation. Although Northern has an open door policy allowing anyone holding a high school diploma or a GED to enroll, all students must take an admission test, either the ACT, SAT, or COMPASS to determine their eligibility to enroll in college-level courses. If students score below a specified score, they are required to take transitional courses, primarily in mathematics, reading, or writing, before

enrolling in college level courses. On their admission applications, students indicate their goals, such as the programs they are interested in, the degrees, if any, they are seeking, and their transfer plans. This information allows the appropriate personnel to collect entry data for students by program and/or certificate/degree. The final piece of information about the students at this point is the high school or previous college transcript. Information about courses taken are used to assess the need for an admission test. Some programs may require a specific standardized admission test to identify placement or program content knowledge.

2. Students During Enrollment

Assessment of student learning begins at the classroom level; however, institutional assessment is not about grading individual students or individual instructors. All assessment data is reported, analyzed, and applied independent of individuals and personalities. All instructors state clearly on their syllabi the course objectives, expected outcomes of student learning, and the method of measuring those outcomes.

Instructors adhere to Master Course Guides (MCG), which identify student learning outcomes and student performance objectives that are common to all sections of the course regardless of the instructor. During a semester, many instructors use classroom assessment techniques (CATs) for immediate feedback on the level of learning taking place. The results from the CATs may be reported to the Assessment Committee by each Division. The assessment committee has developed a timeline for submission and dissemination of information with feedback and follow-up activities.

Beginning with 2004, the College is participating in the Community College Survey of Student Engagement (CCSSE). This national instrument measures student learning and engagement from an institutional perspective. We use this as an individual measure of success. The assessment committee has developed a timeline for submission and dissemination of information with feedback and follow-up activities.

3. Students After Graduation

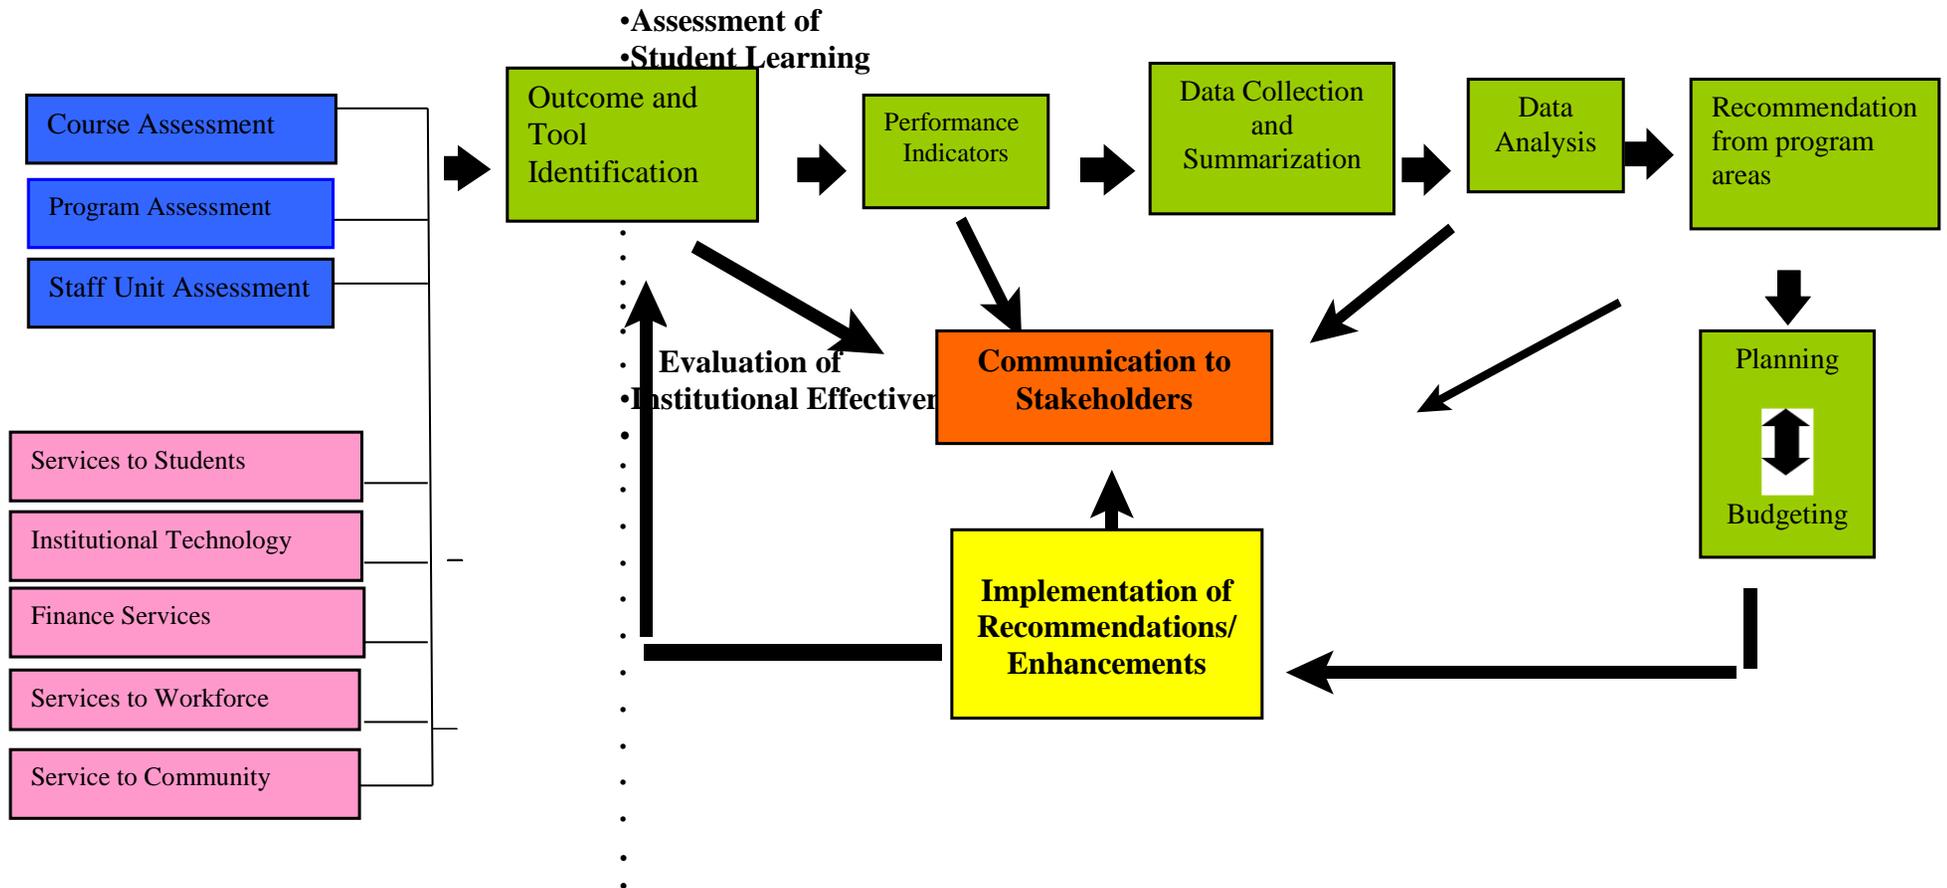

A major component of education is to teach students to use the knowledge they gain. Socrates said education is to help people learn how to live well. Assessment of student learning must extend after graduation to determine if the graduate “lives well”. Northern recognizes two distinct groups of graduates: those who enter the workforce immediately and those who transfer to a four-year institution for further studies. For the students who enter the workforce, the Office of Institutional Research (IR) track the graduation rate and licensure statistics, job placement data, and employer satisfaction surveys. For the students who transfer to a four-year institution, the IR Office tracks the graduation rate, transfer rate and transfer success. The IR Office collects the data from these areas; the affected faculty reviews the data and develops revisions suggested by the data; and the program director or division chair submits the data and suggestions to Institutional Effectiveness Committee for institution-wide analysis and use.

G. West Virginia Northern Assessment of Student Learning and Institutional Effectiveness Model

The model for assessment of student learning and evaluation of institutional effectiveness does not prescribe what must be assessed or measured or what assessment tools should be used. Consistent with the philosophies of the Assessment Plan, the model is based on the principle that decisions such as these are best made by the collaboration of the personnel within the program area. The Assessment Committee and Office of Institutional Research (IR) are available to provide technical assistance to help program areas choose assessment measures and/or tools. However, the program or division is ultimately responsible for collecting data that contributes to divisional and institutional assessment and improvements. The figure below diagrams the model.

- Each program/division/staff unit determines which assessment and evaluation measures should be assessed for the cycle and what tools are appropriate for collecting the data.
- Each program/division/staff unit determines performance indicators (standards, benchmarks), which will be used for comparison purposes. Note, some performance measures and indicators may be stipulated by external agencies.
- Data is collected and summarized. If assistance is required from IR, the division must confer with IR in developing the assessment/evaluation plan.
- Each program/division/staff unit analyzes the data and prepares a brief summary report of the results or a comparison of the findings with the performance indicators and presents recommendations for improvement.
- Recommendations from the program/division/staff unit, which have budget and/or planning implications, must be submitted to the budget and/or institutional effectiveness committee.
- After making changes, the program/division/staff unit will measure the effect of the changes and prepare a follow-up report.
- Communication is an essential aspect of student learning and institutional effectiveness. It is placed in the center of the Model to signify that communication is necessary to promote the continuous flow of the assessment process.

•Model for Assessment of Student Learning
• and Evaluation of Institutional Effectiveness

•Definitions: (1) Assessment - Measurement of student learning. (2) Evaluation - Measurement of institutional effectiveness

H. Structured time-lines for Assessment of Student Learning

Assessment of student learning is an on-going process that occurs throughout the year. To keep the assessment manageable a three year Assessment Rotation cycle was developed and is currently in use.

After the accreditation visit in 2013, a recommendation was made to assess general education outcomes at the course and the program level. Assessment a rotation cycle was established. Based on the rotation cycle, faculty will collect and analyze data at various times of the year depending upon the assessment activity and where it falls within the course and program schedules. The faculty submits the Assessment Report Form to the Division Chair and Institutional Assessment Coordinator who reviews and forwards reports to the Assessment Committee. The Assessment Committee will review data collection and propose feedback and provide a Division Assessment Compilation Report to the Division chair. The Assessment Committee will post data results to a secure institutional assessment web site.

Updated Collection Report Forms are identified:

Pre-Assessment Proposal Form

This form identifies project(s) for the following academic year to the Assessment Committee. (Appendix D [used only for suggestions for improvement; submitted to the Institutional Assessment Coordinator; staff unit assessment proposal forms can also be used])

Pre-Assessment Peer Review (Appendix I)

Pre-Assessment Reports are peer reviewed These reports are sent to the Institutional Assessment Coordinator for publishing in the Faculty Document Center (webpage).

Assessment Report Form

This form identifies up to three outcomes (Master Course Guide student learning outcomes, course outcomes, program outcomes) that were assessed during the semester (year), methods for assessing each outcome, and benchmarks, which were used to measure success. (Appendix F)

Assessment Report Peer Reviews (Appendix J)

Assessment Reports are peer reviewed: courses, programs, and staff units. These reports are sent to the Institutional Assessment Coordinator for publishing in the Faculty Document Center (webpage).

Faculty may submit reports to the Division Chair or Institutional Assessment Coordinator at any time. However, to assist the faculty in planning for assessment, the following deadlines are established and will be used by the Vice President of Academic Affairs and the Assessment Committee for collection purposes.

ANNUAL ASSESSMENT SCHEDULE BY DATE

August 15	Assessment committee and designees submit course, program and staff unit peer reviews from previous academic year
September 15	<i>Faculty</i> submit Assessment Report Form of spring (previous) or academic year-long (previous) assessment activities to <i>Division Chair and Institutional Assessment Coordinator</i> .
November 15	<ol style="list-style-type: none"> 1. Assessment committee and Institutional Assessment Coordinator submit Program Peer Reviews 2. Assessment Committee and Institutional Assessment Coordinator submit Staff Unit Peer Reviews (previous year)
February 15	<i>Faculty</i> submit Assessment Report Form of fall (previous) assessment activities to <i>Division Chair and the Institutional Assessment Coordinator</i> .
April 15	<ol style="list-style-type: none"> 1. Assessment committee and Institutional Assessment Coordinator submit Course Peer Reviews 2. Program Directors submit annual Program Assessment reports to Division Chair and Institutional Assessment Coordinator 3. Staff Unit Supervisors submit annual Staff Unit Assessment Report to Institutional Assessment Coordinator

Note: If curriculum changes or budget implications for the following year are being recommended from fall assessment projects, recommendations to the appropriate committee may be required prior to the Assessment Committee deadline. Assessment Report Proposals can be submitted anytime for feedback from the Institutional Assessment Coordinator and/or Assessment committee.

Updated Schedule for Submitting Assessment Reports by Semester

Assessment Activity	Fall Semester Deadline	Spring Semester Deadline
Division Chairs notify lead faculty of which courses are to be assessed during the following semester.	By the end of the prior spring semester	By the end of the prior fall semester
Lead faculty select general core outcomes to assess and submit Pre-assessment Proposal form to Division Chair.	September 2	January 22
Lead faculty ask other faculty teaching the same courses to use the proposed activities and measures to assess the same outcomes and submit the results to the lead faculty member by the end of the semester.	September 16	February 5
Participating faculty send results and recommendations to lead faculty responsible for submitting the report.	By the end of the fall semester	By the end of the spring semester
Lead faculty compile, analyze data, complete, and submit assessment report to the Division Chair.	February 15	September 15

I. Roles and Responsibilities related to Assessment of Student Learning and Institutional Effectiveness

Faculty

- A. Define learning outcomes
- B. Prepare and update Master Course Guide (Appendix K) and submit changes to Division Chair.
- C. Determine methods for assessing outcomes
- D. Participate in data collection and analysis
- E. Submit appropriate reports in identified schedule [Assessment Proposal Form (Appendix D) and Assessment Report Form (Appendix E)] to Division Chair.
- F. Utilize assessment data to improve teaching and learning.

Program Chair

- A. Identify and provide to division chair internal and external assessment and or accreditation requirements.
- B. Identify and define Program Outcomes with associated Matrix.
- C. Collaborate with faculty and division chair for assessment activities related to accreditation, state, or institution requirement.
- D. Assist with program recommendations resulting from assessment activities.
- E. Submit annual Program Assessment Report
- F. Participate in Program Report Peer Reviews

Division Chair

- A. Create schedule of course, program, and division assessment.
- B. Coordinate classroom, course, program and division assessment activities.
- C. Submit Proposed Assessment Forms and Assessment Reports to Assessment Committee.
- D. Review results of assessment activity and make recommendations for improvements
- F. Monitor and collect updated Master Course Guides to be filed in Division and submitted to Vice President of Academic Affairs to be published in the Faculty Document Center.

Administration/Staff

- A. Provide resources through Institutional Research to collect and analyze data
- B. Support assessment initiatives with appropriate materials
- C. Provide technical expertise to assist with process and professional development
- D. Use assessment data in planning processes to improve institutional effectiveness

Assessment Committee and Institutional Assessment Coordinator

- A. Review assessment process and make recommendations for improvements
- B. Review proposed assessment projects and provide assistance.
- C. Review Assessment Reports and produce a Course Assessment Peer Review
- D. Provide Division Assessment feedback to Division Chairs and General Education Committee
- E. Collect and secure assessment documents.
- F. Maintain a Web Page for faculty, administration, and students.
- G. Determine professional development needs for assessment and facilitate appropriate professional development activities

General Education Committee – General Education Core Assessment

The general education core component applies to students enrolled in all degree and certificate programs. A general education course is one that meets the requirements for the General Education Core Outcomes for at least one degree or certificate program. (See Appendix C for General Education Core Outcomes).

- A. Establish a schedule of periodic review for the courses and associated Master Course Guides in the General Education Core Component.
- B. Coordinate and collect Assessment Report Form from faculty, programs, divisions, advisory committees, accreditation review teams which measures the student learning outcomes for the General Education Core Courses identified on course Master Course Guide.
- C. Identify, coordinate and collect assessment data from faculty, programs, divisions, advisory committees, accreditation review teams which measures the institutional outcomes for the General Education Core Outcomes.
- D. Submit reports to Assessment Committee.

The General Education Committee (GEC) is composed of representatives of each division. The recommendation is for the committee to be chaired by a faculty member. The GEC will work closely with subject area faculty, program chairs, division chairs to coordinate all assessment activities and reporting related to the general education core component. The General Education Committee will report directly to the Vice President of Academic Affairs.

To accomplish this goal the GEC has established an initial timeline for planning assessment activities. See below:

Activity	Tentative Date	
Review and update General Education Core Matrix	October 15, 2015	Completed
Disperse General Education Core Matrix to program chairs	October 30, 2015	Completed
Collect and review current assessment data from relevant institutional groups.	January 2016	Completed. Data collected need to be modified
Create Web page for General Education	August 2016	Linked to Assessment Page
Collect updated General Education Master Course Guides and post to General Education Web page.	August 2016	MCGs updated to include General Education Outcomes
Establish a schedule of assessment for General Education Core Courses and General Education Core Objectives.	November 2015	Completed

Curriculum Committee

Assure and implement recommendations for revisions resulting from assessment activities that are requested and approved by Curriculum Committee.

Institutional Research

- A. Support data collection and summary analysis.
- B. Provide expertise in collection methods.
- C. Identify reasonable timelines for collection and summarization of data that will involve IR office
- D. Administer CCSSE and other evaluation tools.
- E. Publish Institutional Research data on IR Web Page.

J. Course Assessment

1. Student Learning Outcomes for each course are listed in its Master Course Guide. The *Master Course Guide (MCG)* defined here identifies course content, student learning outcomes, and student learning performance objectives. The Master Course Guide is the official document by which faculty delineate the course definition, structure, proposed student learning outcomes, and student learning performance objectives. Every course taught on all campuses is required to have a Master Course Guide, which is designed by faculty members in the Division who teach that particular course. All faculty members on all campuses must adhere to the requirements contained in each Master Course Guide. It is essential that the

Master Course Guide be current and followed if courses are to have the continuity vital to ensure the desired learning outcomes. Master Course Guides are updated with course scheduled assessment or as needed with revision of course, approved by the division chair, and confirmed by the Vice President of Academic Affairs. Approved Master Course Guides are available in division offices and on the Assessment Committee Web Page.

Master Course Guide requirements (Appendix J), guidelines for writing student learning outcomes and student learning performance objectives, sample verb list, and a template for writing a Master Course Guide (Appendix K) are available in the Faculty Document Center.

2. Course Assessment of Student Learning Outcomes:
The Assessment Committee suggests that from 1-3 **student learning outcomes** be addressed in one Annual Assessment Report. These student learning outcomes may incorporate any number of student learning performance objectives.
3. Examples of Methods of Assessment are listed in the Model for Student as a Developing Learner
4. Indicators / benchmarks are determined for each assessment project.
5. Course assessment submission shall follow *Annual Academic Cycle and Division Schedule of Assessment*.

K. Program Assessment

Program Assessment at WVNCC incorporates the program review process. However, the college recognizes that program assessment must involve more than program review to lead to continuous improvements in student learning. Specifically, program review occurs every three to five years, but effective assessment of learning in programs must be ongoing. Therefore, program assessment will be composed of three components: program review, annual institutional assessment project, and external accreditation reviews or self studies. Annual Program Assessment Reports are required. These program Assessment Reports will be peer-reviewed and both the report and the review will be published in the Faculty Document Center

1. Outcomes
 - A. Program review:
Program review follows a cycle and process outlined in the Board of Governors Multi-Year Process for Curriculum Evaluation Rule. Outcomes in the review process include but are not limited to; graduation rate, employment rate, student retention, transfer rate, licensure/certification success, graduate satisfaction, and employer satisfaction.

- B. Annual program assessment project:
Every year each program will determine which specific outcome(s) {one (1) or more} will be measured for the annual assessment report.
Programs identify two or so program outcomes for student learning in collaboration with Program Advisory Committee, External Accrediting Agencies, and Employers.
- C. External accreditation review (self-study)
This is a multi-faceted review process in which the elements are prescribed by the accreditation agency. Schedule of review is determined by agency.

- 2. Methods/Measures
Examples of Methods of Assessment for both components are listed in the Model for Student as a Developing Learner.
- 3. Indicators
Indicators / benchmarks are determined for each assessment project.
External accrediting or other agencies may pre-determine some specific indicators.
- 4. Cycles/Process
Defined by college
Defined by accreditation agency
Defined by time-lines for assessment of student learning
- 5. Program Review and Annual Assessment
Program outcome matrix is an additional method for program assessment. Initial Program Outcome Matrix for the 2006 WVNCC Plan for Assessment of Student Learning was to be completed by each program and submitted to the Assessment Committee by February 2006. Ongoing monitoring and modifications are a part of the assessment cycle.

The Program Outcome Matrix Form is included in the Appendix A.
Members of the Assessment Committee and volunteer faculty are available for assistance or provide examples of completed Program Outcome Matrixes.

L. Staff Unit Assessment

In 2010, annual staff unit (department) assessment reports were initiated. In the following year, a staff unit assessment report peer review form was created and 2010 staff unit reports were peer reviewed. This process is now in place and will continue on an annual basis.

M. Evaluation of Institutional Effectiveness

While assessment of student learning is a critical component in the evaluation of institutional effectiveness it is only one of many components. The West Virginia Northern Assessment of Student Learning and Institutional Effectiveness Model outlines the process to be utilized for all components. Each area is responsible for determining outcomes, methods, indicators, and cycles for evaluation process. This

includes course, program and staff unit assessment reports and corresponding peer review reports. Use of these data direct course, program and staff unit improvements to booster student learning and Institutional Effectiveness.

ASSESSMENT MATRIX**

Demonstrate problem-solving and critical thinking skills														
Employ mathematical and science literacy skills														
Acquire a cultural, artistic and global perspective														
Demonstrate professional and human relations skills														

Appendix C

General Education Core Outcomes

1. Communicate effectively in oral and written formats
2. Employ or utilize information access and literacy skills
3. Demonstrate problem-solving and critical thinking skills
4. Employ mathematical and science literacy skills
5. Acquire a cultural, artistic and global perspective
6. Demonstrate professional and human relations skills

Appendix D

General Education Core Outcomes Survey

Please complete the following survey in order to evaluate our ongoing assessment of the general education outcomes as required for HLC accreditation.

General Education Outcomes:

1. Communicate effectively in oral and written formats.

Please check either 'No' or 'Yes' on the table provided for each course.

If you currently implement this outcome in your course, please list specific examples.

2. Demonstrate professional and human relations skills.

Please check either 'No' or 'Yes' on the table provided for each course.

If you currently implement this outcome in your course, please list specific examples.

Course	No	Yes	Specific Examples of Outcome

Appendix F

Guide for Assessing General Education Outcome

Critical Thinking/Analytic Inquiry/Problem Solving

Definition: This area of learning incorporates the comprehensive exploration of issues, ideas, and events, the analysis of these explorations, and the designing, evaluating, and implementing of strategies to draw informed conclusions, form opinions, solve problems. This includes the ability to know when more information is needed, and where to identify, locate, effectively evaluate, and use information in this process.

Outcome for students receiving a One-Year Certificate: Students will distinguish fact from opinion, identify assumptions when constructing an argument, employ one or more approaches to solving problems, and determine conclusions that are tied to the results of the strategy.

Outcome for students receiving an Associate's Degree: Students will distinguish fact from opinion, question the validity of some assumptions, explain why various approaches to solving a problem may be effective, and discuss several possible conclusions.

Outcome for students receiving a Bachelor's Degree: Students will examine the reliability of sources, analyze own and others' assumptions, evaluate the success of various strategies to solve problems, and discuss several possible conclusions. Taking opposing viewpoints into consideration.

Outcome for students achieving an Advanced Level: Students will synthesize information from reliable sources, evaluate own and others' assumptions, develop problem-solving strategies as needed, and evaluate several possible conclusions. Taking opposing viewpoints into consideration.

Essential Traits	Performance Levels		
	Certificate Benchmark	Associate's Benchmark	Bachelor's Benchmark
Fact versus Opinion	Distinguish the difference between fact and opinion by thoroughly evaluating evidence and evaluate the relevance of facts.	Distinguish fact from opinion by thoroughly evaluating evidence and questioning the viewpoints of experts.	Determine whether or not information is factual by critically examining the reliability of its source.
Assumptions	Identify own and others' assumptions when presenting a position.	Question the validity of some assumptions.	Thoroughly (systematically and methodically) analyze own and others' assumptions when presenting a position.
Strategies	Employ one or more strategies/approaches to solve a problem.	Explain why one or more approaches for solving a problem will be effective.	Evaluate the success of one or more strategies/approaches to solve a problem and, based on this evaluation, discuss several possible conclusions.
Logical Conclusions	Determine a conclusion that is tied to the results of the strategy.	Discuss several possible conclusions, taking into consideration multiple viewpoints.	Evaluate several possible conclusions, taking opposing viewpoints as well as related outcomes (consequences and implications) into consideration.

Recommended as a guide for institutional assessment. Approved by the WV Higher Education Assessment Council on January 22, 2015

Appendix G

Pre Assessment Proposal Form

Please submit completed form to Division Chair as part of teaching goals for the academic year.
Please add additional lines as needed to describe your assessment plan.

Division: _____ **Department:** _____

Date: _____ **For Academic Year:** _____

Assessment Type: Classroom ___ Course ___ Program ___ Gen Ed ___

Fall _____ Spring _____ Full Academic Year _____

List the course and sections being assessed.

List the faculty participating in the assessment.

Who is responsible for submitting the report?

When the activity will be conducted? Spring _____ Fall _____

Which outcomes and/or objectives are being assessed?

General Education Outcomes:

Course Objectives/Outcomes:

Appendix N

West Virginia Northern Community College Master Course Guide Requirements

Description

The Master Course Guide (MCG) is the official institution document by which faculty delineates the purpose, structure, and proposed outcomes of a course. Every course taught on all campuses has a MCG which was designed by faculty members in the division who teach that particular course. All faculty members on all campuses must adhere to the requirements contained in each MCG. It is essential that the MCG be followed if courses are to have the continuity vital to ensure the desired learning outcomes. Master Course Guides are approved by the Division Chair, confirmed by the Academic Affairs office, and are on file hard copy in both the Division and Academic Affairs office, and on the Assessment Web page.

Elements

The Master Course Guide is the key document in defining each course in the college curriculum. Each MCG is composed of the sections listed below.

Title Page

The following information appears on the title page of each MCG:

1. the name West Virginia Northern Community College,
2. the words "Master Course Guide",
3. the course number,
4. the course title,
5. the date of revision,
6. the dated signature of faculty members who participated in the preparation of that MCG,
7. the dated signatures and titles of administrators who confirmed that the MCG was developed according to the established procedures and that it meets the college's requirements.

Heading

The first page of the MCG begins with the course number and course title.

Course Description

This section includes the following:

1. a verbatim copy of the course description as it appears in the college catalog,
2. an expanded description of the course that gives more detailed information about the contents and general structure of the course,
3. the number of weekly lecture hours and (if applicable) laboratory hours,
4. the number of credit hours,
5. a list of any prerequisites and co-requisites that are listed in the college catalog,
6. a list of required supplies,
7. a statement that any required text is available at bookstore.

General Education Outcomes

This section lists general education outcomes addressed in the course. General education outcomes are statements that focus on what students are expected to demonstrate at the conclusion of the course.

Student Learning Outcomes

This section identifies student focused educational goals that can be measured. These outcomes are a statement of the knowledge, skills, and competencies that students are expected to demonstrate with achievement of the student learning performance objectives upon successful completion of the course.

This section includes:

1. A list of five (5) to fifteen (15) statements of measurable student learning outcomes of the course.
2. Development of outcome statements as a student learning goal.
3. Write each statement as a measurable outcome.
4. The incorporation of any number of student learning performance objectives to achieve each outcome.

Student Learning Performance Objectives

This section identifies benchmarks of knowledge, skills, and performance related to lessons or units that the student is able to demonstrate as a result of instruction.

This section includes:

1. A list of objective statements that communicates to the benchmark of instructional units or performances as a result of instruction.
2. Development of the objective statement as a learner product.
3. Use only one action verb at the beginning of an objective statement (3 to 12 words).
4. Write an objective statement to conform to about 3 hours of learning time (1class + 2 outside class)

Revisions

The Master Course Guide is to be kept accurate at the course, division, and institution level. Review is to be completed and documented with each scheduled assessment of course. Revisions are to be completed with revision of course and or course instruction content. Updated M\CG's are available in Faculty Document Center.

Appendix O

West Virginia Northern Community College Master Course Guide

MASTER COURSE GUIDE

COURSE HEADING & NUMBER:

COURSE TITLE:

COURSE/CATALOG DESCRIPTION:

PREREQUISITES: (must be taken ***before*** this course)

COREQUISITES: (must be taken at ***exactly the same time*** as this course)

PRE/COREQUISITES: (can be taken ***either before or at the same time as this course***)

CREDIT HOURS:

LECTURE HOURS PER WEEK:

LAB HOURS PER WEEK:

REQUIRED TEXT: (We don't usually enter anything specific here as we would have to change the master course guide every time we changed books. We usually just say "As adopted", or "Check with instructor or the College bookstore for the current text".

COURSE LEVEL OBJECTIVES/LEARNING OUTCOMES:

"Upon successful completion of the course, students will be able to":

There are usually 4 or 5 *course level* objectives listed here. These are more global in nature than the unit level performance level objectives (see attached sample of a master course guide for PSYC 105)

SPECIFIC PERFORMANCE OUTCOMES/UNIT LEVEL OBJECTIVES:

“Upon successful completion of course units, modules, or chapters, students will be able to”:

There are usually between 20 and 45 unit level objectives for any particular course (see attached sample)

GENERAL EDUCATION OUTCOMES:

The College has adopted general education outcomes, listed in the current catalog under “general education”. If your course is a general education course OR you believe that students gain these skills as a result of successfully completing your class, include them as performance outcomes and indicate that they are general education outcomes*. If you do not believe your students necessarily gain these skills in this specific class, don’t include them (see attached sample).

- Communicate effectively in oral and written formats
- Employ or utilize information access and literacy skills
- Demonstrate problem-solving and critical thinking skills
- Employ mathematical and science literacy skills
- Acquire a cultural, artistic and global perspective
- Demonstrate professional and human relations skills

TYPES OF ASSESSMENT TOOLS USED:

Formative: At least 3 of the following: participation and/or satisfactory performance in classroom discussions or activities, homework or in-class assignments, student’s self- reports, small group interaction, self-appraisal or application activities.

Summative: At least 2 of the following: participation and/or satisfactory performance on quizzes, review questions from textbook, videos, class discussions, or activities, unit exams, final exam, research paper or project, course evaluation, self-evaluation, pre and post tests.

Minimum acceptable standards: For quizzes, homework, and assessment activities listed, the instructor’s analysis of satisfactory demonstration of knowledge will be used; on summative methods such as exams, papers, or projects, achieving a letter grade of “C”, or 70% or above will demonstrate satisfactory understanding and basic mastery of outcomes.
